Principle

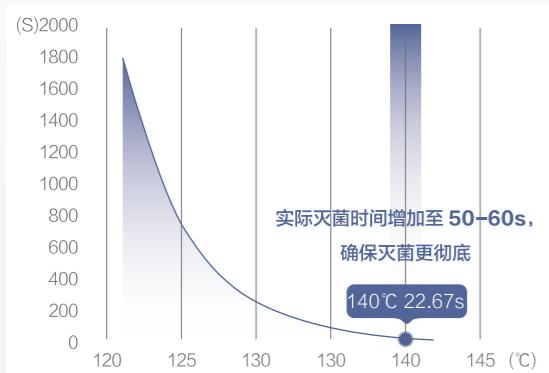

设备原理

智能瞬时连消机是一种采用高温瞬时灭菌，结合高效换热器、新型维持器和喷射器，并通过智能算法运行的灭菌设备。该设备节能环保、无菌保障率高，操作方便、运行稳定，广泛应用于抗生素、氨基酸、酶制剂、新材料、食品饮料等行业的液体物料灭菌领域及生物制药废水灭活领域。

设计原理

根据等效灭菌曲线，常规物料在 121°C，30min 所达到的灭菌效果和 138°C，36s 所达到的灭菌效果一致。而消毒过程对物料营养物质的破坏主要由灭菌时间所决定（遇热极敏感的物料除外）。

根据高温短时灭菌原理，加入一定保险系数，采用 138~140°C，50~60s，设计出此套新型连消系统。

Sterilization principle

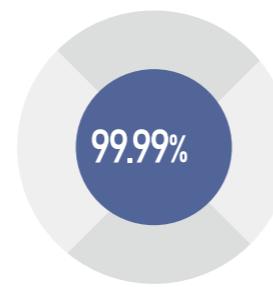

According to the equivalent sterilization curve, the sterilization effect of conventional materials at 121°C, 30min is the same as that at 138°C, 36s. However, the destruction of nutrients in materials during disinfection is mainly determined by the sterilization time (except for materials that are extremely sensitive to heat). According to this principle of high temperature and short time sterilization, after adding a certain safety factor, our company has designed this new type of continuous disinfection system by using the sterilization temperature of 138~140°C and the maintenance time of 50~60s.

Composition

设备构造

维持器

选择特殊流道尺寸，在线清洗，结构紧凑，无存料死角，阻力小，不结垢、无焦化物、无物料黏结。

喷射器

充分利用蒸汽汽化潜热，结构紧凑，阻力小，无震动；
特殊流道尺寸、高流速设计及合适的清洗方案
避免物料本身颗粒物长期运行造成物料残存；
特殊构造保证加热均匀，避免物料局部温度过高产生焦化而结垢。

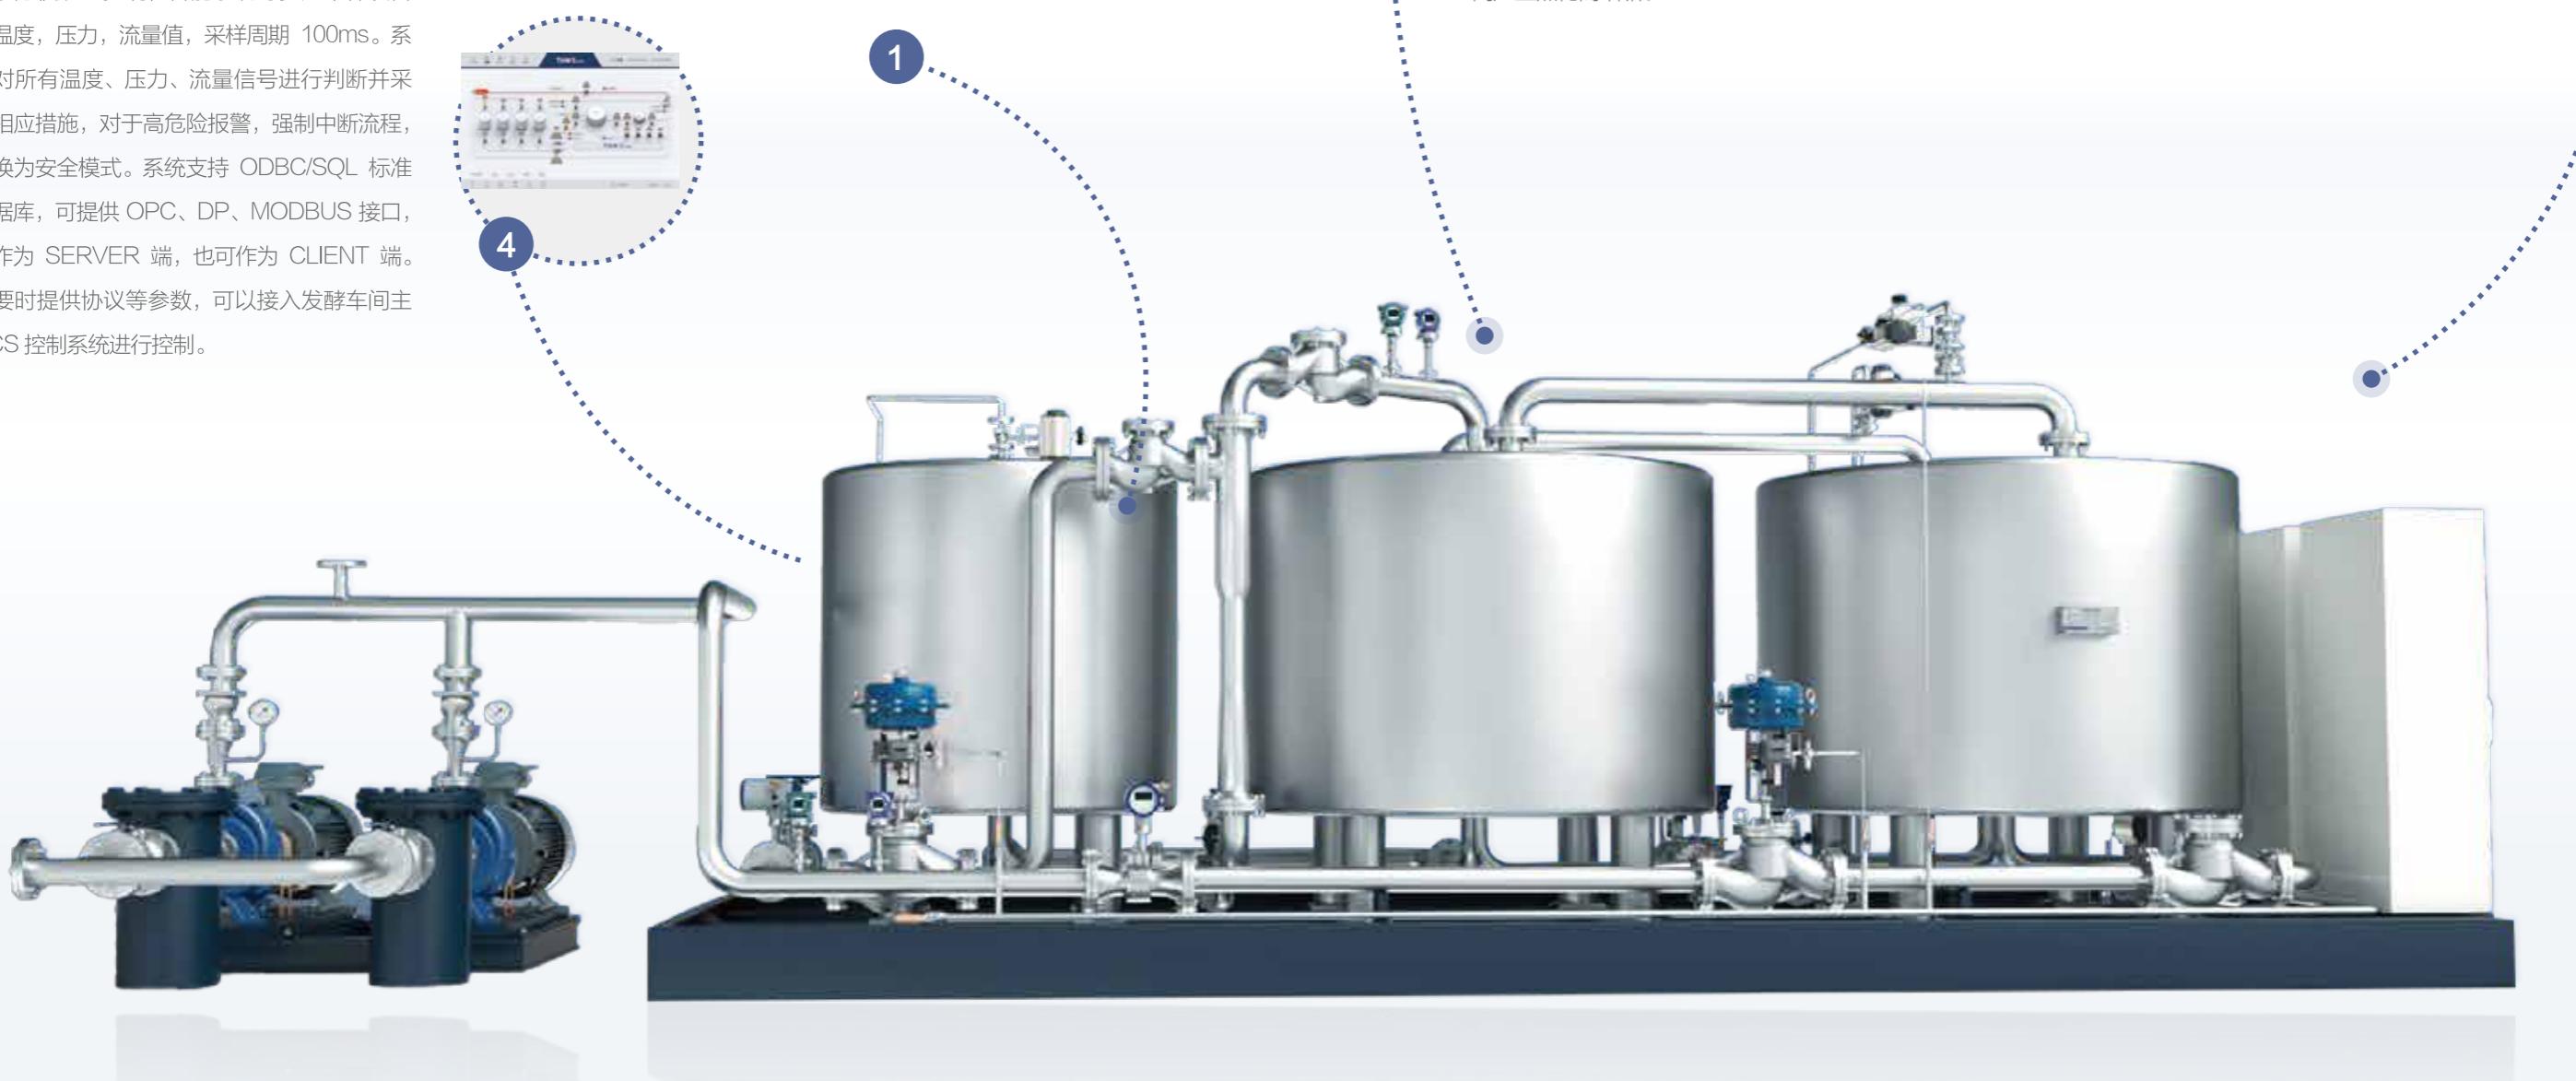

换热器

采用整张板材卷制而成，中间无焊缝，全部自动焊接，对板材无损伤，不会造成板材穿孔，不会内漏。
换热器两端封条打坡口，保证焊透，减小应力。焊接时由里及外释放应力；焊接完成后，经过振动处理释放应力，避免外漏。

自控系统

采用西门子 S7-1200PLC 控制系统，配备触摸屏以方便现地控制，智能系统可多点采样设备的温度，压力，流量值，采样周期 100ms。系统对所有温度、压力、流量信号进行判断并采取相应措施，对于高危险报警，强制中断流程，切换为安全模式。系统支持 ODBC/SQL 标准数据库，可提供 OPC、DP、MODBUS 接口，可作为 SERVER 端，也可作为 CLIENT 端。必要时提供协议等参数，可以接入发酵车间主 DCS 控制系统进行控制。

Composition

设备构造

Maintainer

Special runner size is selected, on-line cleaning is carried out, the structure is compact, no dead corners of materials exist, the resistance is small, no scaling, no coking matter and no material adhesion are realized.

Ejector

Make full use of latent heat of vaporization of steam, with compact structure, small resistance and no vibration.

Special flow channel size, high flow rate design and appropriate cleaning scheme can prevent the material from remaining due to the long-term operation of particles in the material.

Heat Exchanger

It is rolled from the whole plate, with no welding seam in the middle, and all automatic welding has no damage to the plate, and will not cause perforation or internal leakage of the plate.

Automatic Control

Siemens S7-4200PLC control system is adopted and touch screen is equipped to facilitate on-site control. The intelligent system can multi-point sample the temperature, pressure and flow value of equipment with a sampling period of 100 ms. The system judges all temperature, pressure and flow signals and takes corresponding measures. For high-risk alarm, the system forcibly interrupts the process and switches to the safety mode.
